

Waterfall Tendering

Waterfall Tendering in Kuebix allows a user to tender truckload shipments to carriers based on a predetermined sequence by lane. The lanes (origin and destination criteria) and sequence of carrier rates can be configured by users and updated at any time. If a carrier rejects a shipment tender, a new tender will be automatically sent to the next carrier in the waterfall sequence.

1. Create your shipment but **do not book**. Once your rates load, you can view the rates, but you will not want to book at this time.
2. Go to the Manage Shipments Grid and filter to your **Saved Shipments**.
3. Search for the shipment(s) you would like to send out a Tender for.
4. Once you have your shipment(s) selected, click **Post Selected Shipments**.

The screenshot shows the KUEBIX Manage Shipments Grid. The status is set to "Saved Shipments". The grid has columns for "A...", "BOL Number", "SO Number", and "Post Selected Shipments". The first row of the grid is selected, and the checkbox in the first column is checked. The "Post Selected Shipments" button is highlighted with a red box.

	A...	BOL Number	SO Number	Post Selected Shipments
<input checked="" type="checkbox"/>	>	KBX-0000417-20	TO-00500020	Erlanger
<input type="checkbox"/>	>	KBX-0000390-20	TO-00500014	Wilton

5. A tender email will trigger to the first carrier in the sequence of this lane. You can view the carrier sequence as well as how much time the current carrier has remaining to accept the Tender. To view this information, change the status to Review Posted, click on the arrow next to your shipment

number, and then click on **Rates**. On the right, you can see the sequence and the amount of time left for the carrier to accept the load.

- The Tender will continue to pass to your carriers, following the predetermined sequence, until a carrier chooses to Accept the load.
- Once a carrier Accepts the load, the shipment is automatically booked and moves to the **Booked Not Picked Up** status in the Manage Shipments grid.
